Smart Data's professionally developed and designed ecommerce sites are data-driven & are optimized for Search Engines , Internet marketing

Social Networking Application:-

Social network service is an online platform for building as well as managing social networks among likeminded people sharing common interests and/or activities. Social network services are web based and provide means for users to interact over the internet, such as e-mail and instant messaging. Social networking sites allow users to share ideas, activities, events, and interests within their individual networks.

Web based social networking portals make it possible to connect people who share interests and activities beyond political, economic and most importantly geographic borders. Social networking portals tend to share some conventional features. Most often, individual users are encouraged to create profiles containing various information about them. Lately, Social Community Applications are used as a medium for several organizations to create profiles to advertise and promote products as well as services.

The reason is to build online social networks for users to interact by chat, messaging, email, video chat, voice chat, photo sharing, file sharing, blogs, discussion groups, common interests, affiliations, hold discussions in forums etc. And revenue starts floating with every new user coming to the network. Social Networking works as a chain reaction which rapidly increases the network in seconds. We have implemented social networking functionalities of major social networking sites including LinkedIn, Facebook, Tweeter, StumbleUpon.

Classified Web Application

Classified is a web application where people are searching & finding their required things like Home, jobs, vehicle, business Leads, all electronics item. It can be in two ways both the buyer & seller of the product can be benefited. This is completely customized, user friendly & easy way to generate revenue. Classified sites have Photo Gallery, Video gallery, Blog, forum & many more.

Online examination Software application

Exam Software is a Test Management Software to create and conduct computer based online examination. It is a most powerful user friendly test generator, exam generator educational software available in the academic market at affordable price. You can even administer the examination in conventional method by printing the question papers. Be your kid's tutor yourself by taking tuitions using Exam Software. Web Promotion

From among 200 million websites, to ensure that your website is found and recognized you need to promote your website. If no one knows about the existence of your site, you won't have any visitors. Unless visitors know of your existence and use your services your site cannot reach the popularity that it deserves! We have the ultimate web-promotion package that will give your site the maximum exposure and your business a new direction. The Promotion (Website Traffic Enhancement) Plan includes features like : Search Engine optimization

- Promotion of website through Global and Local search engine submissions
- Promotion of website through submission to industry/ organization related sites
- Nominating websites for awards on design, aesthetics and functionality.
- Promotion of website by posting ads in classified ad sites
- Promotion of website through submission to Announcement sites
- Promotion of website by increasing Link popularity

Internet Marketing:-

Idea Technology Solutions has been helping clients increase their Internet visibility through proven search engine marketing campaigns and SEO. Whether you are looking for guaranteed ranking or large volumes of search engine traffic.

Portal & Vortal Development:-

Sites like Yahoo, CNN and MSN are considered portals and are gateways into the Internet. A Portal attracts a broad (horizontal) range of users, whereas Vortal appeal to a more narrowed (vertical) audience.

Vortal focus on a group of people with a specific passion or interest. They are sometimes called 'online communities' or 'vertical portals.' If you are interested in horses, for example, go to horsenet.com. Here, you can chat with others interested in horses. You can also buy horse-related products and books and find miscellaneous information about horses.

We can build your Portal, Vortal or Community. This Portal development may include adding several features or components that are not normally found on a typical site. For example, you may need a discussion forum where your visitors can share ideas or experiences. To get this forum working on your site requires installing a third party software (component).

ITES

Our Quality

Ideatechnosolutions have concerns about the quality and accuracy of data entry work. However, these concerns can be put to rest once the client understands the stringent quality process that data entry work goes through. We enter data manually (from image or paper) or through computer assisted data capture, using

- OCR (optical character recognition),
- ICR (intelligent character recognition),
- Mark sense,
- MICR and
- Bar code.

Information is checked by validation routines including table look-ups, data/range checks, and relationship validation. Processed documents are then sent to verification stations where experienced operators verify the accuracy of processed information. This product is then turned into Data and properly formatted Data (record layout) is quickly transmitted to the client's computer

The need for data conversion is at a peak now as there are several processes and challenges present in any enterprise: mergers, acquisitions and new technology developments. The accessibility, quality, and diversity of information that a firm has at its disposal is becoming increasingly important to clients. Converting data to a readily available and easily accessible format is a must.

Data conversion services

Data Capture, which involves defining forms to the system, scanning the forms, and executing Forms Processing (FP), which recognizes forms and text on forms. Data Validation, which provides for verification and correction of the data recognized by Forms Processing or for data entry when a form cannot be recognized. Data Output, which produces files based on the input from the forms and writes these files in a format suitable for processing by other applications or legacy systems. System Services, such as monitoring, indexing, printing, and security; and other service functions, such as document querying batch, sort and code records.

Other Services

- Scanning
- Electronic Recognition: OCR (Optical Character Recognition) & ICR (Intelligent Character Recognition)
- Bar Code
- Marc Sense
- BioMatric Devices

Data Processing is a category of IT Enabled Services pertaining to capture, digitization and processing of data emanating from various sources. Traditional data processing services comprise of punching data from manually filled forms, images or publications; preparing databases and integrating them. However, with the advent of multimedia and Internet, the scope and range of data processing has grown. Sources have widened to include manually printed documents, images, sounds and video. Equally diverse are the new output media, which include databases on servers, hard copy publications, CD-ROM authoring and managing records emanating from internet based queries.

Organizations with extensive data turnover and client interface can use high-speed data com links for their back office and data processing operations. This enables them to save costs and valuable resources.

Data Processing services cater to companies / organizations, which receive or generate large quantities of information that is handwritten/ typed and time sensitive. These forms can be sent either physically or can be scanned and transmitted to the vendor's facility. The data processing may be done using high speed, automated systems reading handprint, check boxes, mark sense, reader response, bar codes, and most data slots that are on a form. Information can be processed from hard copy, fax or scanned version.

Many companies enter data manually (from image or paper) or through computer assisted data capture, using

- OCR (optical character recognition),
- ICR (intelligent character recognition), mark sense,

- MICR and
- Barcode.

Information is checked by validation routines including table look-ups, data/range checks, and relationship validation. Processed documents are then sent to verification stations where experienced operators verify the accuracy of processed information. This product is then turned into Data, and properly formatted Data.

Data Digitization:-

Digitization is the process by which physical or manual records such as text, images, video, and audio are converted into digital forms. This is of paramount importance when projects need directions based on already established facilities and the implementing agency needs to find the scope for expansion.

Digitized data offers the following benefits: Long term preservation of documents, orderly archiving of documents, easy & customized access to information, easy information dissemination through images & text, CD-ROMs, internets, & extranets

The digitization process includes:

- Identification of client needs and intended use of the digitized records.
- Translating client needs to digitizing objectives by means of requirement specifications, system analysis, and designing the system for the planned product.
- A pilot application of technology for approval and testing is then developed. On its approval by the client, a data source chart for the source material is developed. The source material may include printed forms, images, sounds, and video. The printed format requires maximum processing, as other formats can be easily converted into digital form.
- The documents are now printed so that their accuracy can be checked manually. These are scanned using special Optical Character Recognition (OCR) software and the historical documents are keyed in. Proofreaders check the output manually before being converted to the desired format (ASCII, HTML, PDF, MS-Word).
- The images are scanned; old and faded images are recovered using advanced digital correction software. The sound and video data are captured through a data capturing software and hardware and converted into digital form; filtering through editing software may enhance the quality of the digital version.
- The digitized data are integrated into an easily accessible form by incorporating indexes and tables of contents. These are now authored on CD-ROMs or other suitable media depending on the intended use of the data.

Accuracy is achieved through a double keying system where every coding entry is made twice and automatically compared with proprietary software. Any discrepancy is rejected and the coding is done afresh for the rejected Set-of files.

E-Cataloging

E-Cataloging is a technology of processing paper catalogs to digitized data for the web. As virtual shopping is gaining ground throughout the world paper catalogs are no more a good approach to selling your products. E-Cataloging is a new technology that manufacturers and distributors throughout the globe are adopting to sell their products. The process involves Paper Catalog from the manufacturer/distributor is collected.

- Duplicating (Documenting) the catalog for Analysis.
- Database Analysis to prepare the catalog database structure.
- Approval for the database structure from the client.
- Production of the catalog.
- Quality assurance

- Real Time Statistics For Measuring Success of Promotion Campaign
- Time saving

Search Engine Optimization (SEO):-

Search Engine Optimization is a process to make your web pages search engine friendly, implementing the meta tags and keywords, content optimization and finally working on link building to gain quality links.

A website can prove a most reliable and highly profitable venture if promoted and marketed in a professional way. Website is your organization's face to your online customers, hence We help your business get better recognition by bringing your website on first page of search engines like Google, Yahoo, MSN or Rediff for popular keyword searches. It attracts people's attention at a very key juncture – when they are searching for information on search engines. The process of getting traffic from search engines is called Search Engine Marketing. Getting ranked in natural results of search engines is called Search Engine Optimization whereas buying sponsored advertising on search engines is called pay per click advertising. We can help you increase sales/ leads for your business by leveraging successful internet marketing strategies on your website.

On Page Optimization: The website may be very well designed having attractive flash or pics, it might be very impressive to the users but there are chances that it might not be seo friendly

website. Implementing Meta tags, keywords within the content, Image optimization is the first and foremost step to be taken towards search engine optimization .

Link Popularity/Building Services: To get high rank position with the search engines and more traffic to your website, it is essential to work out a focused link building strategy to establish link popularity on the web. Higher the quality of incoming links better your search engine rankings and internet visibility. We offer the following manual link building programs to assist you with your website promotion program:

1. Directory Submission
2. Article Submission
3. Reciprocal Link Building

Manual Directory Submission

Directory Submission is one of the best method to get quality one way links to your website.

- Major Benefits of Directory Submission :
- It increases your website's link popularity.
- Links are permanent and one way.
- We submit your website to seo friendly web directories only.
- We manually submit your website to web directories. We do not use any automated software or script for directory submission.
- We submit using various anchor text.
- Your site will be submitted to the most appropriate category in the web directory.

Article Submission Service:-

Article Submission is one of the best methods of gaining quality one-way incoming links to your website and has become a part and parcel of search engine optimization (SEO) process. You write the quality articles and we take care of its distribution. We can submit your article to around 750 best article directories which would give good quality back links to your website with the anchor text of your choice. Your articles will be published in all of the best publishing

resources which allows the distribution of your article along with the embedded links to your website.

Reciprocal Link Development:-

With thousands of sites out there, it takes time and efforts to choose websites to exchange links that are relevant to the subject of your website to maintain the interest level of your visitors. They all require a lot of effort and time! The process of scouring the web looking for suitable websites, contacting the webmasters and agreeing reciprocal links, updating the links pages and monitoring the link exchange is time consuming and laborious.

We find relevant theme based websites to get reciprocal links and get your links placed on them. You also need to give them a link back for those websites on your website.

We build relevant text links using anchor text containing your top keywords.

Advantages of doing Business with us:-

Idea Technosolutions has the prerequisites to cater to your varying needs in the field of web design, web application and software development.

Being based in India, we can provide extremely cost-effective development without compromising on quality. Graphics, design aesthetics, design technique and programming are our strong points and we are always willing to understand, appreciate and anticipate the end user experience.
